Received by	[REDACTED]

Summary of information provided	
Brief descriptive title	EM-OTHER - GRIFFIN RTM Topples over during preparation works.
Incident location	
Subtype/s	Facility integrity, Other
Summary <i>(provided at notification)</i>	<p>Woodside decommissioning delivery manager reports that during preparation operations the Griffin RTM has toppled over and is now stable on the seabed.</p> <p>The RTM was leaning on a 15-degree angle, and it toppled over in that direction away from the ROV and the vessel. The RTM has been visually inspected with the ROV, there are deformities within the section that houses the foam but there are no visible openings at that location. No visible signs of anything leaking on the water's surface. The RTM did have 900 tonnes of ballast and the ballast has leaked from the RTM. Samples of the ballast have been collected and will be sent for testing.</p> <p>The RTM has had holes drilled into it to flood the compartments, so it doesn't refloat. Inspector [REDACTED] has requested footage and/or photographs of the RTM on the seabed as well as results from the ballast testing when it has been completed.</p>
